Over the last 20 years abundance of common hake (*Merluccius hubbsi*) has declined 80% in the Southwest Atlantic as a result of over-fishing, claims Argentina's Fundación Vida Silvestre, Wild Life Foundation, (FVSA). The NGO also warns that currently 61% of hake catches in Argentina are made up of juveniles, a trend that if allowed to continue would lead to the collapse of the fishery in less than two years times.
