

Canadian Marine Ecosystems Under Threat

Written by Administrator

Wednesday, 20 October 2010 19:45

A study by the Canadian government indicates that marine ecosystems in all three oceans are under threat. Vanishing marine species, warming water temperatures and a new wave of contaminants have struck Canada's marine ecosystems. Canadian delegates with other delegates from more than 190 countries are in Japan for a two-week UN biodiversity conference where they will be negotiating new targets to protect the world's ecosystems and save species from extinction. The 2010 Canadian Marine Ecosystem Status and Trends Report is available [here](#)
