

Jeremy Jackson: How We Wrecked the Ocean

Written by Administrator

Wednesday, 05 May 2010 17:37

In a video talk posted on The Huffington Post, coral reef ecologist Jeremy Jackson lays out the shocking state of the ocean today: overfished, overheated, polluted, with indicators that things will get much worse.

Jackson's work and presentation focuses on the future of the world's oceans, given overfishing, habitat destruction and ocean warming, which have fundamentally changed marine ecosystems and led to "the rise of slime." Although Jackson's work describes grim circumstances, even garnering him the nickname Dr. Doom in some circles, he believes that successful management and conservation strategies can renew the ocean's health.
